

SWPS University offers studies in areas such as **psychology, management, law, culture, philology, journalism, design and computer science**. Our graduates know how to work with people and for people, to apply their creativity in areas that serve mankind, to create and implement effective solutions for the world of culture, business and grassroots organizations. All the study curricula take into account the practical aspect of studying. We teach students using real-life examples of individuals, organizations and societies. Learn more about the competencies of our graduates!

PSYCHOLOGY

In the area of psychology, we pursue studies in various specializations which allow our students to make informed choices concerning the directions of their further professional development. Among others, we teach students to:

- carry out diagnoses and design intervention strategies
- discover the neural foundations of human behaviour
- provide professional support for people at different stages of development
- apply their psychological knowledge in business contexts and in human resource management
- work in an intercultural environment and multicultural teams
- apply their psychological knowledge in the justice system
- carry out advanced group work including in situations of conflict, crisis or disaster
- apply creative problem solving and decision making strategies in the organization

The field of psychology is implemented on all campuses of the SWPS University: in Warsaw, Katowice, Sopot, Poznań and Wrocław.

Graduates of our studies in the field of **criminal psychology** know how to create the profile of an unknown perpetrator of a crime, they are able to effectively interrogate witnesses and suspects, and know what interventions can be taken against convicted offenders to prevent them from returning to a life of crime.

MANAGEMENT

In the area of **management**, we implement a new model of educating managers as leaders of change who know how to achieve ambitious goals and are prepared to carry out innovative business ventures.

Graduates of studies in the field of **Management and Leadership** learn to identify the needs of the digital world, diagnose problems and implement innovative programs through hands-on activities that involve analyzing various business scenarios.

Human resource management graduates are able to support organizations in modifying business models and adapting human capital management to current global trends. They are also able to justify their decisions using concrete data, which makes them valuable partners for any business.

The above mentioned studies are carried out by SWPS University in Warsaw

LAW

Students studying **law**, in addition to sound legal knowledge, acquire practical skills and competencies in other fields which are also useful in the work of a lawyer, including management and psychology. Our lawyers can talk to people, explain complex legal situations, negotiate and resolve conflicts. Students have an opportunity to study law at SWPS University in Warsaw, Poznań and Wrocław.

After completing studies in the field of **business law**, graduates possess knowledge of the legal aspects of running a business and are equipped with such competencies as conflict management and negotiation skills. They will have developed managerial competencies and become proficient in business English.

For those who are interested in politics and how the world is changing, we offer studies in the field of **public life**. Graduates of this programme are able to research social phenomena, analyze political events, mobilize people around important issues and conduct joint projects. Business law and public life are carried out at SWPS University in Warsaw.

CULTURE, PHILOLOGY AND JOURNALISM

As part of the **cultural studies** programme, we teach our students to understand contemporary culture in all its complexity. We educate sensitive and empathetic humanists who can diagnose the problems of reality as well as create and implement effective solutions for the world of culture, business and grassroots organizations. We have specializations in the area of innovation and service design (School of Ideas), contemporary culture, media and digital culture as well as manager-agent- producer. This field of study is offered in Warsaw.

Studies in **Philology (English, Swedish, Norwegian, Italian, Iberian and Asian studies)** serve the purpose of mastering a chosen foreign language at C1 level, studying its practical use in the context of communication and business, and learning about the literature, history, culture, politics and social life of the selected target language area. We also offer the opportunity to study two foreign languages at a fast pace. These fields of studies are implemented at SWPS University in Warsaw.

As part of our studies in **journalism**, among other things, we teach our students how to cooperate with specialists from different media industries. Under their guidance, students complete workshops in professional radio and television studios and learn about the tools of a contemporary journalist. Upon graduation, students are highly specialised in their chosen area including **online marketing, online communication, branding, advertising and public relations, digital and social media**.

We offer studies in journalism at SWPS University in Warsaw and Wrocław.

DESIGN

We offer studies in our **School of Form** in Warsaw - an innovative design institute that is a centre of knowledge, research and innovation, a place that educates designers capable of

understanding people and exploring their dreams. Students can choose from four specialisations including **communication design and product design**.

Graphic Design, implemented in Wrocław, is another innovative project with a unique curriculum, which is a response to the requirements of the constantly evolving job market within the creative industries. Our graphic design programme is a unique combination of knowledge in the area of graphic design, social communication, psychology and psychophysiology of vision.

In the field of **psychology and computer science**, we pursue specialisations in **e-health** - designing online healthcare interventions, **artificial intelligence (AI)** psychology - designing models of intelligent behaviour that make robots capable of decision-making, learning, and abstract reasoning, and **UX Research&Design** - designing digital services and products. That field of study is offered in Warsaw.

COMPUTER SCIENCE

Students studying **Computer Science** are taught much more than programming or application design - they also learn how to spot and resolve problems using the knowledge and tools of computer science and with an openness to human and social issues. Solid foundations in the area of algorithms, data structures, computational complexity, optimization or analysis, combined with the necessary soft skills, result in the competencies required to work in the IT industry, including in startups, corporations or the student's own company. Currently, computer science is implemented at SWPS University in Warsaw.

The SWPS University community is always open to emerging educational needs. We also pursue our passion for design and education by creating numerous attractive postgraduate programs. Discover our rich offer here: [postgraduate education](#).
